Infrastructure Insights

Foundational Data Exploration

Q1 · Districts & Income Tiers

```
select
distinct(district_name), income_tier
from districts;
```

📊 18 districts — 3 High, 6 Mid-Range, 9 Low-Mid income tiers.
High: Wilanów, Śródmieście, Żoliborz

Q2 · Stations per District

```
select
count(charging_stations.station_id),
districts.district_name from
charging_stations
right join districts
using
(district_name)
group by
district_name;
```

📊 Ursynów leads with 12 stations, Wesoła has 11. 5 districts have 0 stations.

Q3 · Plugs per District

```
SELECT
district_name,
SUM(plugs_count)
AS total_plugs
FROM
charging_stations
GROUP BY
district_name;
```

📊 Ursynów: 72 plugs · Wesoła: 66
Wilanów: 48 · Total: 390 plugs (13 districts)

Q4 · Total Sessions

```
SELECT COUNT(*)
AS total_sessions
FROM
charging_sessions;
```

📊 114,000 total charging sessions recorded across all stations and districts in Warsaw.

Q5 · Avg kWh per Session

```
SELECT ROUND(
AVG(kwh_charged),2)
AS avg_kwh
FROM
charging_sessions;
```

📊 39.13 kWh avg/session. High avg driven by premium EVs — Audi e-tron (61.6 kWh), Porsche (60.3 kWh).

Revenue, Energy & Behavioral Analysis

Q6 · kWh by District

```
SELECT cs.district_name,
ROUND(SUM(se.kwh_charged),
2)
FROM charging_sessions se
JOIN charging_stations cs
ON
se.station_id=cs.station_id
GROUP BY cs.district_name
ORDER BY
SUM(se.kwh_charged) DESC;
```

📊 Ursynów 820,630 kWh
· Wesoła 767,641 kWh
Wilanów 546,042 kWh · 5
districts: 0 kWh

Q7 · Top 5 Stations by Sessions

```
SELECT station_id,
COUNT(*) AS
total_sessions
FROM charging_sessions
GROUP BY station_id
ORDER BY total_sessions
DESC
LIMIT 5;
```

📊 #1 Station 163: 1,856 ·
#2 Stn 150: 1,851
#3 Stn 27: 1,825 · #4 Stn
92: 1,824 · #5 Stn 68:
1,811

Q8 · Revenue by District

```
SELECT cs.district_name,
ROUND(SUM(se.total_cost),2
)
AS total_revenue
FROM charging_sessions se
JOIN charging_stations cs
ON
se.station_id=cs.station_id
GROUP BY district_name
ORDER BY total_revenue
DESC;
```

📊 Ursynów: zł2,101,300 ·
Wesoła: zł1,964,951
Wilanów: zł1,398,086 ·
Włochy: zł1,051,340

Q9 · Avg Cost by Income Tier

```
SELECT c.income_tier,
ROUND(AVG(s.total_cost),2)
AS avg_cost_per_session
FROM charging_sessions s
JOIN customers c
ON
s.customer_id=c.customer_id
GROUP BY c.income_tier;
```

📊 High: zł142.45/session
Mid-Range:
zł117.78/session
Low-Mid: zł75.19 · +89%
premium for High tier

Q10 · Avg Energy per Customer

```
SELECT
ROUND(AVG(total_kwh),2)
AS avg_kwh_per_customer
FROM (
SELECT customer_id,
SUM(kwh_charged) AS
total_kwh
FROM charging_sessions
GROUP BY customer_id
) sub;
```

📊 557.53 kWh per
customer lifetime
≈ 9 full charge cycles for a
60 kWh EV battery

Infrastructure Gap & Readiness Analysis

Q11 · Projected EVs vs Actual Plugs

```
SELECT d.district_name,
       d.projected_evs,
       d.projected_plugs,
       COALESCE(SUM(s.plugs_count),0)
       AS actual_plugs
FROM districts d
LEFT JOIN charging_stations s
ON
d.district_name=s.district_name
GROUP BY d.district_name;
```

📊 37,100 projected EVs · 390 actual plugs
Ratio: ~95 EVs per plug · Only Wesola meets projections

Q12 · Districts Where EVs > Plugs

```
SELECT d.district_name,
       d.projected_evs,
       COALESCE(SUM(s.plugs_count),0)
       AS actual_plugs
FROM districts d
LEFT JOIN charging_stations s
ON
d.district_name=s.district_name
GROUP BY d.district_name
HAVING d.projected_evs >
       COALESCE(SUM(plugs_count),0);
```

📊 ALL 18 districts flagged!
Mokotów: 3,500 EVs/30 plugs ·
Wola: 3,300 EVs/12 plugs
5 districts: 0 plugs, 1,000–2,500 EVs

Q13 · kWh Demand per Projected EV

```
SELECT d.district_name,
       ROUND(SUM(se.kwh_charged)
             / d.projected_evs, 2)
       AS kwh_per_projected_ev
FROM districts d
LEFT JOIN charging_stations st
ON
d.district_name=st.district_name
LEFT JOIN charging_sessions se
ON
st.station_id=se.station_id
GROUP BY d.district_name;
```

📊 Wesola: 1,096.63 kWh/EV (highest)
Wlochy: 341.24 · Ursynów: 282.98
Wola: 42.36 kWh/EV (under-served)

Q14 · Infrastructure Readiness Ranking

```
SELECT district_name,
       ROUND(actual_plugs*100.0
             /projected_plugs,1)
       AS readiness_pct,
       RANK() OVER
       (ORDER BY readiness_pct
        DESC)
       AS readiness_rank
FROM (...) sub;
```

📊 Rank 1: Wesola — 314.3%
✅
Rank 2: Wlochy — 100.0% ✅
Rank 3: Ursynów — 81.8% ⚠️
Ranks 14–18: 0% (no infrastructure)

What the Queries Revealed

18 Districts, Only 13 Have Stations

5 districts have zero charging infrastructure: Bielany, Praga Południe, Białołęka, Wawer, Praga Północ — all projecting 1,000–2,500 EVs.

Ursynów Dominates Supply

12 stations, 72 plugs, 820K kWh delivered — single-handedly the largest contributor to network capacity and revenue (zł2.1M).

High Tier Pays 89% More

High-income customers spend zł142.45/session vs zł75.19 in Low-Mid. Yet High zones have fewest stations — massive missed revenue.

All 18 Districts Under-Plugged

Q12 confirms every district has projected EVs exceeding actual plugs. Wola needs 88 more plugs, Mokotów needs 76 more.

Wesoła: Outlier District

Only district with 314% readiness ratio — 66 plugs vs 21 projected. Its 1,097 kWh/EV reflects actual usage far exceeding plans.

Top 5 Stations Are Clustered

Stations 163, 150, 27, 92, 68 each handle ~1,811–1,856 sessions. All in high-demand districts — uniform utilization confirms good

PAGE 4

Revenue & Planning

Financial Insights

Infrastructure at a Glance

65

Stations

390

Plugs

6

Avg Plugs/Station

18

Districts

Mid-Range Dominates Station Count

Ursynów leads with 12 stations, Wesola has 11. Mid-Range districts hold 30 stations (46.15%) while High-income has only 13 (20%) — a stark imbalance visible in the donut chart.

Ursynów Tops Plug Capacity

Ursynów at 72 plugs and Wesola at 66 — far ahead of all others. The dual-axis chart confirms Ursynów leads on both station count and plug capacity simultaneously.

5 Districts Have Zero Infrastructure

The dashboard bar chart flatlines at 0 for Bielany, Praga Południe, Białołęka, Praga Północ, and Wawer — a systemic planning failure visible at a glance.

Analyst Recommendation

Redirect capital away from Ursynów/Wesola toward zero-coverage zones. The donut chart's 20% High-tier share is the clearest evidence of where revenue is being left on the table.

Usage Patterns & Session Behavior

114K

Total Sessions

4M kWh

Energy Charged

39.13

Avg kWh/Session

18

Districts Covered

Midday Peak — 8 AM to 3 PM Window

Plateau from 8–15h rather than a morning spike — indicating commercial/workplace charging dominates, not commuter patterns.

Tuesday Is Busiest Day of the Week

Sessions peak on Tuesday (16,727) and dip on Sunday (15,263). The modest 9% gap suggests EV charging is habitual daily behavior.

Who Is Charging & How Much

8,000

Customers

60.20

Avg Battery kWh

557.53

Avg kWh/Customer

Mid-Range Income Tier

52,323 sessions | 1.85M kWh | zł5.25M

4K customers (50%)

Core revenue engine. Highest volume.

Low-Mid Income Tier

38,867 sessions | 1.67M kWh | zł3.89M

3K customers (35.25%)

High volume, low spend per session.

High Income Tier

22,810 sessions | 0.94M kWh | zł2.28M

1K customers (14.88%)

Fewest but highest spend per session.

Premium Cars = Highest kWh/Session

Audi e-tron leads at 62 kWh, Porsche Taycan at 60 kWh, Ford Mach-E at 59 kWh. BMW i4: 55 kWh, VW ID.4: 50 kWh. Install DC fast chargers in High-income zones.

Top Customer Consumption (C5490 Leads)

C5490 consumed ~1,898 kWh — over 3× the average. Top 5 customers are high-value targets for loyalty programs and subscription pricing.

Financial Performance & Infrastructure Gap

Dashboard KPIs: zł11.42M revenue · zł175.75K per station · zł100.21 avg session cost · 34K gap

zł11.42M

Total Revenue

zł175.75K

Revenue/Station

zł100.21

Avg Session Cost

34K

Total Plug Gap

Ursynów & Wesoła = 36% of Revenue

Ursynów zł2.19M, Wesoła zł1.96M — together 36% of zł11.42M total. Direct correlation between station count and revenue.

Mokotów Has Largest Gap

Mokotów needs 3,994 more plugs, Wola needs 3,200, Wilanów needs 3,006. All top districts severely under-served.

34K Plug Gap = Massive Opportunity

Closing even 25% of this gap would require 8,500 new plugs and could triple network revenue based on current session economics.

Segmenting Customers by Charging Behavior

K-Means Clustering (K=3) — Silhouette Score: 0.62 (good cluster separation)

```
from sklearn.cluster import KMeans
from sklearn.preprocessing import StandardScaler
from sklearn.metrics import silhouette_score

# Build customer feature matrix
cust_features = sessions.groupby('customer_id').agg(
    total_sessions = ('session_id', 'count'),
    total_kwh = ('kwh_charged', 'sum'),
    total_spend = ('total_cost', 'sum'),
    avg_kwh_session = ('kwh_charged', 'mean'),
    avg_cost_session = ('total_cost', 'mean')
).reset_index()

# Normalize features
scaler = StandardScaler()
X_scaled = scaler.fit_transform(
    cust_features[['total_sessions', 'total_kwh',
                  'total_spend', 'avg_kwh_session']])

# Optimal K via Elbow + Silhouette = K=3
kmeans = KMeans(n_clusters=3, random_state=42, n_init=10)
cust_features['cluster'] = kmeans.fit_predict(X_scaled)
score = silhouette_score(X_scaled, cust_features['cluster'])
```

HIGH-VALUE CHARGERS

~1,400 customers · ~19 sessions · ~850 kWh

Premium EV owners. Top revenue contributors. Target with fast-charging subscriptions.

REGULAR COMMUTERS

~4,200 customers · ~14 sessions · ~550 kWh

Core mid-range users. Steady, predictable usage. Best candidates for monthly plans.

OCCASIONAL USERS

~2,400 customers · ~8 sessions · ~220 kWh

Infrequent, low-spend. Likely new EV owners. Target with onboarding offers.

Performance Overview – All 3 Models

Model 1 · Demand Forecasting

Random Forest Regressor

R ² Score	0.87
MAE	~12.4 sessions/day
RMSE	~18.2 sessions
Best Feature	Month + Day of Week

💡 Helps city planners decide WHEN and WHERE to add new plugs before demand peaks.

Model 2 · Session Cost Regression

Gradient Boosting Regressor

R ² Score	0.91
MAE	±8.34 / session
Top Feature	kWh charged (78%)
Accuracy	±8% of actual cost

💡 Enables dynamic pricing engines. Operators can quote accurate session prices before charging begins.

Model 3 · Customer Clustering

K-Means (K=3)

Silhouette	0.62 (good)
Clusters	3 distinct groups
Largest Seg.	Commuters (4,200)
Inertia	Reduced 68% vs K=1

💡 Enables personalized marketing: subscriptions for commuters, premium plans for high-value users.

5 Actions Warsaw's EV Team Must Take

Data-driven priorities from SQL analysis + Power BI dashboard + Machine Learning insights

01

CRITICAL · Infrastructure

Deploy Stations in 5 Zero-Coverage Districts

SQL Q12 + PBI Page 1 confirm Bielany, Praga Południe, Białołęka, Wawer & Praga Północ have zero plugs despite projecting 9,300+ EVs. Immediate greenfield investment required.

02

HIGH IMPACT · Revenue

Expand High-Income Zones to Unlock Revenue

SQL Q9 shows High tier pays zł142/session. PBI Page 4 confirms only 13 stations serve these areas. Adding 100 plugs in Śródmieście/Żoliborz could generate zł3M+ annually.

03

ML MODEL 1 · Planning

Use ML Forecasting for Plug Expansion Planning

Demand Forecasting model ($R^2=0.87$) predicts session volume by hour/day/district. Use predictions to pre-position plugs before EV registrations spike, not reactively after.

04

ML MODEL 2 · Revenue

Implement Dynamic Pricing Based on Regression Model

Cost Regression ($R^2=0.91$) identifies kWh as the #1 cost driver. Pair with hour-of-day feature to implement time-of-use pricing during 8 AM–3 PM peak window.

05

ML MODEL 3 · Marketing

Launch Segment-Based Customer Programs

Clustering reveals 3 clear segments. Target Cluster 1 (4,200 commuters) with monthly subscriptions, Cluster 0 (1,400 high-value) with fast-charge premium plans.

Thank You
